SUMMARY

Product Engineer with experience building products from idea to production by combining software engineering, product strategy, startup execution and customer-focused iteration.

Founder of WashyWashy, a doorstep car washing platform where I designed the business model, engineered the software, built the operational infrastructure, acquired customers, completed 100+ customer orders, generated ₹30,000+ in lifetime revenue, and continuously improved the product through real customer feedback.

Since the age of 18, I've worked with international clients, startups and agencies across web development, technical consulting and digital marketing, collaborating with technical and non-technical stakeholders to deliver production software and measurable business outcomes.

Currently seeking Product Engineer and Full-Stack Engineering opportunities focused on building modern AI-native products.

EDUCATION

Nowrosjee Wadia College

Bachelor of Computer Science, Savitribai Phule Pune University

Graduated 2024

EXPERIENCE

Founder & Product Engineer

2024 – 2026

WashyWashy

Pune

Founded and built WashyWashy, a doorstep car washing platform serving residential customers across Pune.

- Designed and engineered the product from the ground up, owning software engineering, product strategy, operations, branding, pricing and customer acquisition.
- Designed the complete customer experience and booking workflow.
- Built the customer-facing web application.
- Built internal operational dashboards.
- Designed backend APIs and database architecture.
- Managed product roadmap and feature prioritization.
- Built customer acquisition funnels.
- Continuously improved the platform using customer feedback.
- Automated internal operational workflows to enable the business to run with minimal day-to-day intervention.
- Successfully launched a production platform serving real customers.
- Completed 100+ customer orders.
- Generated ₹30,000+ lifetime revenue.
- Validated market demand through real customer usage.
- Iterated the product and operations based on continuous customer feedback.
- Built and operated the complete business as a solo founder before transitioning it into a largely automated operation.

Software Engineering Intern

2021 – 2022

Inflection Zone Dev Labs

Worked alongside experienced engineers building production software for client projects.

- Responsibilities included feature implementation, debugging, repository maintenance, version control, software testing and collaborative development using modern engineering workflows.

Freelance Software Developer & Digital Consultant

2020 – 2024

Delivered web development, technical consulting, SEO and digital marketing services to international clients, startups and digital agencies across multiple countries.

- Managed projects independently from client communication and planning through engineering, deployment and long-term technical support.
- Worked directly with founders, marketers and business owners to translate business requirements into production-ready digital solutions.

Product & Growth

Griv.io (US Startup)

Contributed to product, marketing and growth initiatives within an early-stage startup environment, collaborating with distributed teams on product positioning, content strategy and community growth.

PROJECTS

WashyWashy — Doorstep Car Washing Platform | Designed and built a complete doorstep service platform allowing customers to book professional car washing directly where their vehicle is parked.

- Traditional car washing is inconvenient for customers living in apartments or working full-time. Existing services often require unnecessary travel, waiting and inefficient operational workflows.
- Built the software, business operations, pricing model, customer acquisition strategy and internal management systems required to operate the business efficiently.
- Responsibilities: Product Strategy • Full-Stack Development • Backend Engineering • Frontend Engineering • System Architecture • Database Design • UI/UX Design • Operations Design • Marketing • Analytics
- Technologies: JavaScript • TypeScript • SvelteKit • PocketBase • REST APIs • Tailwind CSS • Progressive Web Apps
- 100+ completed customer orders.
- ₹30,000+ lifetime revenue.
- Real-world customer validation.
- Product continuously improved using customer feedback.
- Automated operations enabling minimal day-to-day management.
